Chair Philip Isenberg  
CA

Dear Chair Isenberg,

PHILIP, THIS IS PROBABLY THE MOST IMPORTANT ISSUE FACING OUR STATE TODAY. WITH CLIMATE WARMING, WATER WILL BE IN SHORT SUPPLY. WE NEED TO SAFEGUARD OUR PRESENT SOURCES OF WATER.

SAVING AND REUSING STORM WATER RUN OFF AND 'GRAY' WATER, THAT IS WATER THAT HAS ALREADY BEEN USED BY FAMILIES AND BUSINESSES, ARE 2 OBVIOUS CHOICES THAT NEED TO BE EXPLORED AND IMPLEMENTED.

I DON'T KNOW ABOUT YOU, BUT MY SPOUSE LEAVES THE WATER RUNNING FULL BLAST WHILE BRUSHING HIS TEETH, IN SPITE OF NUMEROUS REMINDERS. THAT WATER COULD EASILY BE REUSED.

WE NEED TO GET ON THIS RIGHT AWAY. DON'T PUT IT OFF. THE TIME WILL COME WHEN WE WILL BE VERY GLAD THAT WE DIDN'T PROCRASTINATE. AT SOME POINT THERE WILL BE NO LASTING SNOW IN THE SIERRAS. WHAT WILL HAPPEN TO THE FAMILIES AND BUSINESSES IN LOS ANGELES AND VENTURA COUNTIES THEN, IF WE DON'T START TAKING STEPS TO CONSERVE WATER NOW?

BE ESPECIALLY VIGILANT ABOUT THE PRIVITIZATION OF WATER!

This is an important moment for the Sacramento-San Joaquin Bay-Delta ecosystem and the Delta Stewardship Council. The Bay-Delta's ecosystem is in a state of ongoing collapse and there are concerns regarding the long-term physical stability of the Delta. Drafting a visionary and effective Delta Plan will require the careful consideration of a wide range of alternative actions, including significant new directions in water management.

The Council should clearly recognize that the Bay-Delta estuary is over-appropriated and that ecosystem restoration will require stronger flow standards and reductions in average annual diversions. I recommend that the Council use the following broad recommendations to guide the development of the draft Delta Plan and a draft EIR that analyzes a broad set of alternatives.

1. Guarantee Fresh Water to Support & Restore the Delta Ecosystem: The Bay-Delta ecosystem is a national and statewide resource critical to California's economic health, to the plants, animals, birds and fish that live here, and to the health of our communities.
2. Enforce Existing Water Pollution Control Laws: Commit to full implementation and enforcement of state and federal laws to protect both surface water and groundwater quality. The state is failing to meet existing standards to protect Bay-Delta surface water and groundwater quality, and is lagging in the development of new standards

and pollutant loads needed to ensure the health of the estuary's waters. Contaminants such as salt, selenium, mercury, nutrients and pesticides pollute drinking water and damage the health of the Delta, and the damage is mounting.

3. Reducing Reliance on the Delta: Recognize that California has dramatic opportunities to invest in regional water supplies (e.g. agricultural and urban conservation, waste water recycling, groundwater management and urban storm water capture) that can allow the state to meet its future needs, while simultaneously facilitating the restoration of the Delta ecosystem.

4. More Water Exports Should Not be Promised before Safe Limits are Established: Existing export of fresh water flows from the Bay-Delta estuary should be contingent on ensuring sufficient water to support and restore the Bay-Delta ecosystem in perpetuity; and

5. Reduce Risks to people and property by determining a safe yield for water exports: A "water grab" that allows more water exports from the Bay-Delta estuary, ignoring the restraints of nature, expanding exports by promising unrealistic inflated quantities of water does not promote reliability, it promotes conflict. Providing water to areas south of the Delta must protect the habitat, local economies of the Sierra, Northern California, Delta and the San Joaquin River regions.

6. Enforce water rights: Don't allow politically-connected and powerful interests to sell publicly owned water supplies at a profit while damaging surrounding communities and their water supplies.

7. Protect Taxpayers: Taxpayers and ratepayers must not be soaked again -- either through bonds or direct payments for the costs of exporting this water. Any plan adopted to export water out of the Delta from the Northern California and Sierra watersheds must be cost effective and ensure those exporting water from the Bay-Delta estuary can pay the mitigation costs, design, and capital costs.

Thank you for considering the above comments. I look forward to following the work of the Council as it develops the Delta Plan.

Sincerely,

Mrs. Marianne & Gerald Cline
